# ORCHESTRATION AND NOTIFICATION TOOL

# Orchestration and Notification Tool

## What if...?

- Your users spend a lot of time on reviewing data in the system to search for exceptions?
- It takes a lot of effort to constantly update Master data?
- You search for possibilities of easy integration of JDE with your external applications?
- Your processes require a lot of manual actions?
- You are missing the possibility of being informed when there is a failure?

## Tool Benefits

Orchestrations and Notifications can help you in tuning your processes without a need for development. It allows:

- To dispatch messages if an event takes place.
- To run a full process in a sequence as if a user will do it.
- To be called directly from a JDE application screen, external software or can run in the scheduler.
- To create a transaction after an event.
- To create master data from a file.
- To integrate JDE with external applications.

## Benefits:

Limits the number of manual actions to be run in JDE

Allows the automation of processes

Limits the number of modifications

Limits the number of customizations

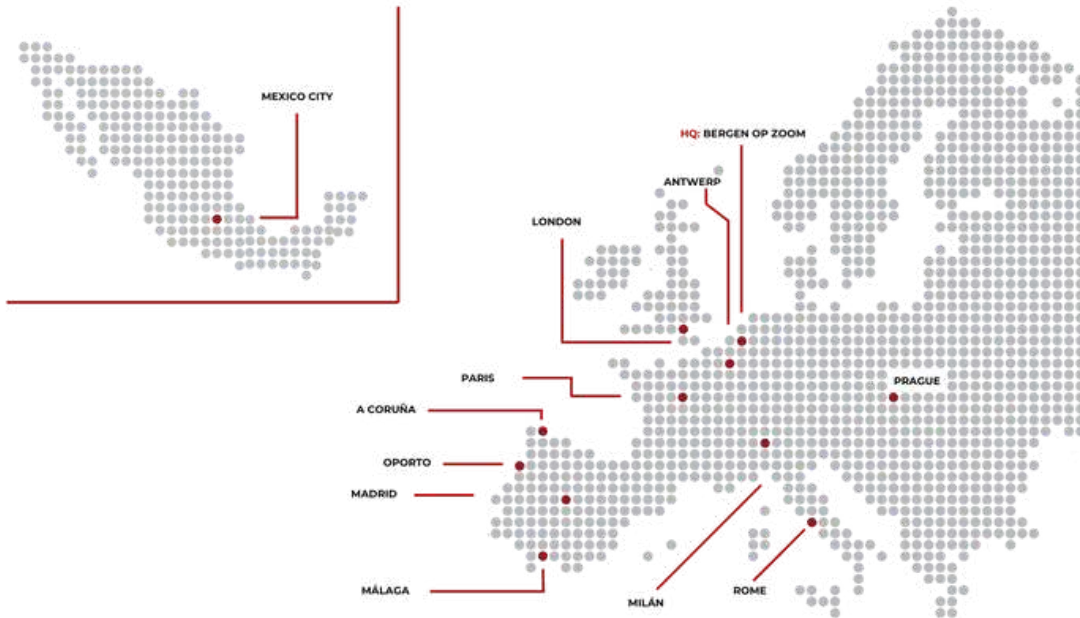

Fewer errors

## Why Orchestrations and Notifications?

Orchestrator Studio, is a built-in Oracle Tool that requires no extra licensing and allows the construction of Orchestrations and Notifications. It is dedicated for key users so no development skills are required when building objects from standard components. If the standard functionality is not enough, extras are developed using Java or Groove scripts, which are commonly used languages.
