

ADEX

JD Edwards Orchestrator add-on for Excel

Do you...?

- Spend a lot of time on Master Data Management?
- Have paper/spreadsheet-based processes that you want to integrate with JDE?
- Want to enable non-JDE savvy users to upload and/or review data?
- Have processes in JDE that take a lot of time or manual effort?
- Want to re-use JDE logic and value outside of JDE?

Then ADEX might be the tool for you and your organization.

Features:

- Fully Integrated: Automatically discovers and integrates with all existing and new orchestrations
- Familiar Excel interface
- Easy to understand Error Handling and Logging
- Integrated return values
- Support for Header Detail applications (Grids)
- Self Service: End users can now upload/download data from JDE without having to go through countless applications, forms and screens.
- No development skills needed: ADEX empowers end users to address an unlimited number of use cases without IT assistance.

Why ADEX?

ADEX is extremely flexible and allows organizations to re-use JDE logic and data quickly and easily by utilizing JDE Native Orchestrations. Doing so opens up JDE to the outside world using the familiarity and power of Excel, while maintaining the data integrity, validation and security from native JD Edwards.

Apart from the above, ADEX has simple system requirements and is installed within 5 minutes.

For detailed requirements please see the following:

- Microsoft Excel 2010, 2013, 2016 or 365
- Microsoft Windows 7 SP1 and above
- Requires JDE EnterpriseOne Orchestrator and AIS server
- DE Apps Release 9.0 or above
- JDE Tools Release 9.1.5.5 Minimum (Recommended 9.2.0 or above)

Benefits:

Automating processes for individuals & departments

Fewer errors

Easier & Faster data migration/
conversion

Oracle JD Edwards Validated Integration

No costly upfront fees or customization costs
